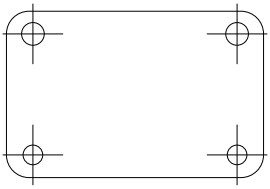
Camera bracket F: 1:1 paper test (print at 100 %, no scaling)

1. Measure the bar below with a ruler: it must be exactly 50 mm. If not, the print was scaled.

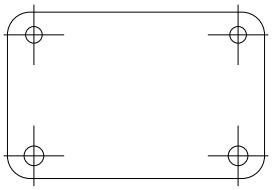
2. Cut out pattern A, hold it on the aluminium plate in the wrist: the two upper holes must sit over the two screw holes.
3. Cut out pattern B, hold it on the back of the camera holder: upper holes over the screw holes, lower holes over the pins.
4. If anything is off by more than 1 mm, tell Claude the direction and the amount before the file is sent.

A: foot, goes on the aluminium brace plate (upper holes 3.0 mm)

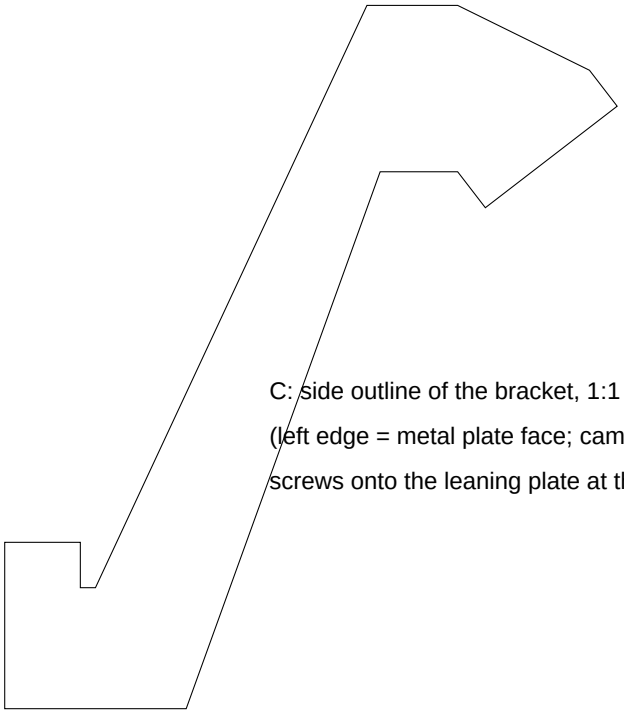


holes 27 apart sideways, 16 apart up/down; plate 34 x 22 mm

B: top plate, goes on the back of the camera holder (upper 2.2, lower 2.6 mm)



holes 27 apart sideways, 16 apart up/down; plate 34 x 22 mm



C: side outline of the bracket, 1:1
(left edge = metal plate face; camera holder screws onto the leaning plate at the top)
